Game for the Vp-Eye 6 series. this is a free virtual showÅ . Vp Eye 6.0 Full Version Free Download.1. Field of the Invention The present invention relates to a liquid crystal display device. 2. Description of the Related Art Various liquid crystal display devices including the transmissive type and the reflective type have been known so far. An active matrix type liquid crystal display device in particular includes a plurality of scanning signal lines, a plurality of data signal lines, a plurality of switching elements, and pixel capacitors. The pixels are formed at intersections between the scanning signal lines and the data signal lines. Each pixel is driven by its corresponding switching element (switching element selection line). With this configuration, a scanning signal is applied to a scanning signal line to thereby select a switching element. A data signal is applied to a data signal line in response to the selection of the switching element. The liquid crystal display device has a configuration including a gate driver to supply a scanning signal to the scanning signal lines, a source driver to apply a data signal to the data signal lines, a pad driver to apply various signals to the scanning signal lines and the data signal lines, and a tape carrier package (TCP) to receive a scanning signal and a data signal. A TCP chip is mounted on an organic film or a tape, and then a TCP tape connected to the TCP chip is mounted on a liquid crystal display panel. The connection between the TCP and the liquid crystal display panel is done through an anisotropic conductive film (ACF) tape. The TCP tape includes conductive particles (conductive particles group) and a resin that is formed of a thermosetting resin or an ultraviolet curing resin. The TCP tape is mounted on the liquid crystal display panel to be oriented in a predetermined position. When the TCP is mounted, it is preferable to detect whether the TCP tape is located at a predetermined position or at an inclined position. A detection method c6a93da74d
