Descargar Arcview 3.2 Para Windows 7 32 Bits

when people are migrating from arcview to arcgis, they often say that arcview 3.x has this and arcview 3.x has that. they are often referring to the limited set of gis and spatial analysis tools that arcview 3.x has in comparison to the complete set of arcgis desktop that arcgis 10.x has. the limited set of tools in arcview 3.x did cause some people to look for an alternative, but i think that arcview 3.x was actually a very capable product. it was the early stages of the gis industry. most of the functionality that arcview 3.x has is still available in arcgis desktop today. it is just that the package is a bit outdated and some of the functionality has been replaced with better alternatives. the last of arcview 3.x's flaws that i think that it has been replaced are the lack of support for the spatial analyst extension. i think that arcgis 10.x and beyond have provided excellent support for the spatial analyst extension. to me, i think that arcview 3.x for the most part is a good product with a few flaws. the first thing that i noticed about downloading arcview 3.x from the installer section of the arcview 3.x website is that you cannot create an arcview project (aka workspace) with the arcview 3.x installer. in addition to this, you cannot open a newly created arcview project from the arcview 3. arcview 3.x projects can only be opened from the arcmap application. one of the biggest strengths of arcgis desktop as a gis application is the ability to open other arcview 3.x projects. this makes it very easy to share your work with others. the arcview 3.x installer was never intended to be used to create an arcview 3.x project for a user to share with others. it is more for the creation of an arcview 3.x project for the arcview 3.x installer to use.
