It's very heavy-duty so you can do lots of editing and figure out your design on the fly without having to destroy your image. It has different pen styles, which are essentially different types of lines you can make. You can also change the thickness or thickness of the line, making it easy to edit and adjust your line. You can also pick different colors and feel the effect of the color change on the line. With this photo of flowers in front of a turquoise sky, I've painted the white petals with a dark gray and covered the rest of the slide with a blue tone. The coral flowers are warm sepia and the green leaves are cool khaki. These colors aren't just interesting to look at; they're also what the eye expects to see. These are only a few of the possibilities for painting and coloring these petals and leaves. When you save the results of your work as a JPEG file, you can instantly share it with anyone, including clients, agents, and art directors. Two powerful tools let you make more editing adjustments to your photo. The marquee tool has three modes: *select*, *marquee*, and *direct select*. Select makes a normal selection, marquee makes a bold, cloud-like selection, and direct select makes a selection based on an existing path, which can be a major time-saver. When selecting a path, the tool behaves in two different ways. You can use one of the three corner handles to select a vertex point or add a new vertex. The marquee tool is also able to select an edge midpoint, a corner point, or a vertex midpoint by selecting the midpoint of a line segment. Once you have a vertex selected, you can rotate the selection either by using the selection marquee or rotating the image with the control key to create a path. Once you are satisfied with the selection, you can then remove it by clicking the logo at the top of the toolbar. To move the selection, click on an empty area of the image. In order to help keep your workflow going, Photoshop has a Keyboard Shortcuts feature. It allows you to assign a shortcut key or combination of keys to a specific Photoshop command. If you have a super-fast workflow that allows you to click *Ctrl* to create a new layer, you can assign the **Ctrl + L** shortcut key combination to this command and create a new layer much faster.
