As I was working, I tried to achieve as much as I could within the set of tasks available to me within a short timeline. In the appendix, you'll find a full list of all of the tasks available. Likewise, you will find a tutorial function to help you use them. You can skip to the end of the tutorial to see the full steps for each of the tasks or reach the "tools" area to see how you achieve tasks such as locating an area of interest or applying a certain effect. When you see an effect that you wish to use, you can click on the "effects" icon and then select a preset to use in your edit. There are many effects, in some cases as many as two dozen, that you can choose from in order to give your image a new look. Other than this, there are no additional filters that you need to worry about. You can save these effects as your own if you wish. Additionally, there are many layers that you can add to your photos. You can duplicate them, split them or lay them on top of each other to create a layered file. The workflow is fast, but not always efficient. If you have a large set of images to edit, you may experience some performance issues. Layers are not readily available in the smaller images I chose to use. And sometimes it is difficult to find the right function for a given effect. (I found that even things like the scissors tool or even the eraser often weren't available, despite the fact that they looked like they were working as advertised.) Which Elements version of the software do you like best: 8.0, 8.0, 8.0 or the new 16.1 version? If you're still on a Mac, do you prefer macOS or Windows? If you're on a PC, is Windows more important to you than macOS is?
