What's New In?

RAM disk is a disk formatted in RAM on the computer. Usually, it is used to store temporary or cache files, which helps to increase performance. Some people are very concerned about the space that is consumed by RAM disk devices, but others don't seem to notice it. Because the RAM disk isn't formatted on your hard drive (it is not stored there), you have to manage it and perform some maintenance on a regular basis. If your disk is really large, you could fill it up in no time and the applications will not work properly. Furthermore, when the RAM disk is created, it appears in the system like any other hard drive, which requires that you buy an extra license for Windows if you plan to connect it to an external USB adapter. RAM Disk Utility is a free utility developed by StarWind. It is designed to help users create RAM disk devices without the need for a Windows license. RAM Disk Utility is a lightweight program that easily creates the RAM disk and sets the parameters you need. After you create a RAM disk, you can easily open it in Disk Management, which allows you to format it. RAM Disk Utility doesn't provide an option to make the RAM disk automatically available when the computer restarts, but it is capable of using it immediately after creation. RAM Disk Utility doesn't come with any other options except the basic ones. You can create a RAM disk of up to 256MB of RAM in size and format it either as NTFS or FAT. RAM Disk Utility can be used to create multiple RAM disks of different sizes in order to get more space for storing temporary files and folders. After you create a RAM disk, you can check its properties using the corresponding right-click option, view its contents using the file explorer, or remove it from your system by using the 'Remove Disk' option in the context menu. There are three ways of removing a RAM disk using RAM Disk Utility. You can select 'Remove Disk' from the context menu, use the 'Remove Device' option from the main toolbar, or simply access the Device menu and choose the corresponding option.
