Get the difference between two Database Views. How it Works: This application uses a smart algorithm to find what has changed in the views between two specified dates. The algorithm does some initial filtering and then parses the SQL, comparing each table and column from each view. This algorithm will identify the differences as an array of objects. This report is a standard report viewable in a view. It has 3 pages (1 history page, 1 default page, 1 detail page). Each page is a separate report. Detailed Information: The application will create a report history page that can be customised. The report history page shows in detail what was changed between the two dates. Using the history page you can browse the different database views. The views can be filtered to show only the date range of interest. You can also view the details of the history and compare the details of the history to the default. The default page also shows a summary of the changes. The default page can be customised with the date range of interest. User requirements: In order to use this application you need to have
